SPRINT 1

Date	10 November 2022
Project Title	personal Assistance for seniors who are
	self-reliant
Team id	PNT2022TMID10355
Title	SPRINT 1

Urls.py:

```
urlpatterns = [ path("", views.college, name="college"),
  path("notice/<int:myid>/", views.notice, name="notice"),
  path("application_form/", views.application_form, name="application_form"),
  path("edit_application/", views.edit_application, name="edit_application"),
  path("status/", views.status, name="status"),

# Authentication path("register/", views.register,
  name="register"), path("login/", views.loggedin,
  name="login"), path("logout/", views.loggedout,
  name="logout"),

# Admin path("handle_admin/", views.handle_admin, name="handle_admin")
```

Admin path("handle_admin/", views.handle_admin, name="handle_admin"), path("users/", views.users, name="users"), path("student_application/<int:myid>/", views.student_application, name="student_application"), path("application_status/<int:pk>/", UpdatePostView.as_view(), name="application_status"), path("approved_applications/", views.approved_applications, name="approved_applications"), path("pending_applications/", views.pending_applications, name="pending_applications"), path("rejected_applications/", views.rejected_applications, name="rejected_applications"),

Code Explanation:

It is considered to be a good practice to create a separate urls file for each app. The urls are into three parts 1) For users 2) User Authentication 3) For admin

Models.py:

```
django.db import models from
from
django.contrib.auth.models import User from
django.utils.timezone import now
from django.urls import reverse
class Application(models.Model):
  COURSES = (
  ('Computer Science Engineering', 'Computer Science Engineering'),
  ('Information Technology Engineering', 'Information Technology Engineering'),
  ('Electronics and Telecommunication Engineering', 'Electronics and Telecommunication Engineering'),
  ('Electronics Engineering', 'Electronics Engineering'),
  )
  STATUS = (
    ('Approved', 'Approved'),
    ('Pending', 'Pending'),
    ('Rejected', 'Rejected'),
  )
  user = models.OneToOneField(User, on_delete=models.CASCADE, blank=True, null=True)
                models.CharField(max_length=100,
                                                    choices=
                                                               COURSES)
  course
                                                                            name
  models.CharField(max_length=200)
                                                    models.CharField(max_length=200)
                                       email
                            models.CharField(max_length=200)
                                                                      address
  phone_no
  models.TextField(max length=200)
                                                    student_profile
                                                                                     =
  models.ImageField(upload_to="images")
                                                       ssc_percentage
  models.DecimalField(max_digits=4, decimal_places=2, null=True) ssc_marksheet =
  models.ImageField(upload_to="images",
                                             null=True)
                                                           ssc_passing_certificate

                                                                jee percentile
  models.DecimalField(max_digits=5, decimal_places=3, null=True) jee_scorecard =
  models.ImageField(upload to="images", null=True)
  Application_Status = models.TextField(max_length=100, choices=STATUS, default="Pending")
  message = models.TextField(max length=100, default="")
  def str(self):
    return self.name
  def get_absolute_url(self):
    return reverse('users')
class Notice(models.Model):
  title = models.CharField(max length=200)
def str(self):
    return self.title
class Detail(models.Model):
  title = models.ForeignKey(Notice, on_delete=models.CASCADE) notice
  = models.CharField(max_length=200)
  def str(self):
    return self.notice
Code Explanation:
```

The most important model of python college admission system is the Application model. It stores all the details of the students personal and educational details. The student while filling the application form gives all these details. The status and message are edited by the admin. Notice and Detail model

stores the notice for first, second, third, and fourth year students. It is possible to add any notice for any category of students.

1. For the home page, all the notice for different year students will be shown (college.html): <div class="container mt-4"> <h1>Important Notice</h1> <div class="row mt-4"> {% for i in notice %} <div class="col-sm-6"> <div class="card"> <div class="card-body"> <h5 class="card-title">{{i.title}}</h5> View all recent updates. </div> </div> </div> {% endfor %} </div> </div> Views.py: def college(request): notice = Notice.objects.all() return render(request, "college.html", {'notice':notice})

On the first page of the project all the notices will be displayed by using the for loop from the Notice model. Students can see the notice by clicking on the title regarding their year or branch.

Code Explanation:
